Summary

BCA student graduating in June 2026 with experience building AI-assisted SaaS products and full-stack web applications. Interested in startup ecosystems, incubators, and multidisciplinary technical roles involving product development, rapid prototyping, and AI-driven workflows. Comfortable working independently across frontend, backend, databases, deployment, and product planning while building real-world software solutions.

Technical Skills

Languages:	JavaScript, PHP, Python, HTML5, CSS3
Frontend:	React.js, Responsive UI Design, State Management
Backend & APIs:	Node.js, Authentication Systems, Native PHP
Databases:	MySQL, SQLite, Supabase
Tools:	Git, GitHub, Vercel, Gemini CLI
Concepts:	Database Design, Debugging, Scalable Architecture, Rapid Prototyping

Projects

MakerHQ | *React.js, Node.js, Supabase*

[GitHub](#)

- Built an influencer marketing SaaS platform with authentication, campaign workflows, and database-driven creator-brand management systems.
- Designed modular frontend/backend architecture using React.js, Node.js, and Supabase while independently handling UI design, backend logic, testing, and deployment setup.
- Used AI-assisted development workflows to rapidly prototype, debug, and iterate features while expanding the project from an academic assignment into a production-oriented SaaS concept.
- Structured reusable components and organized application workflows to simplify future feature expansion and maintain cleaner project scalability.

AgroShare | *PHP, JavaScript, MySQL*

[GitHub](#)

- Developed a platform for agricultural equipment sharing and bulk supply coordination using native PHP and JavaScript for lightweight performance.
- Designed relational MySQL database architecture, implemented secure authentication workflows, optimized CRUD operations, and automated dataset generation for testing.
- Led planning of database structure, application workflows, and interface design before implementation.
- Improved usability by designing straightforward workflows for equipment listing, booking coordination, and user interaction across the platform.
- Adapted quickly to changing requirements during development sprints while balancing feature prioritization, debugging, and collaborative problem-solving.

Hackathon Projects (Team Lead)

6–12 Hour Build Challenges

- Led teams across multiple hackathons focused on rapid MVP development, debugging, and collaborative execution under strict time constraints.
- Built projects including [Scam Guard](#) and [CogniVault](#) while managing planning, task coordination, and technical decision-making.

Education

[JSS SMI UG & PG Studies](#)

Dharwad, Karnataka

Bachelor of Computer Applications (BCA)

Expected June 2026

CGPA: 8.46/10 (up to Semester 5)

Relevant Coursework: Web Development, DBMS, Data Structures, Algorithms, Artificial Intelligence

[PRISM Pre-University College](#)

Dharwad, Karnataka

Science with Statistics

2021 – 2023
